Care plans. Care ₹12,500/mo · Growth ₹25,000/mo · Managed commerce ₹50,000/mo. All pay ₹12,500/day, because recurring revenue is worth more than one-off. Four Growth retainers is break-even on eight days of fifteen.

Foundation

7 services

Static marketing site

₹30,000

Brochure site — pages, copy, images, contact form. No database.

3d

Shipped before

Stack Astro or Next static export · Vercel

Build from a content collection, one component per section, no database. Deploy to Vercel with cleanUrls. Trap: do not add a CMS 'just in case' — the moment content needs editing it is the dynamic tier and should be priced as one.

From the client Copy for each page, or a brief for us to write it · Logo and brand assets · Domain registrar access — add hello@brandmintstudios.in as a user

Dynamic website

₹50,000

Content-managed site — you edit pages, posts and images yourself.

5d

Shipped before

Needs a server

Stack Next.js App Router · Firestore · shadcn/ui

Content lives in Firestore collections; the admin shell sits behind auth; public pages render server-side and revalidate. Agree who edits what BEFORE designing the schema — retrofitting an editable field is a rewrite of the form, the rules and the migration.

From the client Content structure: what you want to be able to edit · Who administers the site

Deployment & domain setup

₹10,000

Live on your domain with HTTPS, previews and rollback.

1d

Shipped before

Stack Vercel · your registrar's DNS

Create the project, point DNS, add the domain, promote by hand so a push never goes live on its own. Trap: add the live host to Firebase authorized domains or sign-in fails with auth/unauthorized-domain and looks like a code bug.

From the client Domain registrar access — add hello@brandmintstudios.in as a user on your own account · Confirmation of the exact domain to use

They pay directly Vercel (free tier usually sufficient) · Domain registration ~₹1,000/yr

Platform migration

₹60,000

Content, catalogue and customers moved

6d

Adjacent — low risk

Needs a server

Stack export → transform → import → redirects

Export everything, transform to the new model, import, then run both in parallel before cutting over. Trap: the redirect map is the deliverable. Lose it and you lose their search rankings, which is the one damage you cannot undo.

From the client Access to the current platform — add hello@brandmintstudios.in as a user · A full export of current data

Performance rescue

₹30,000

Lighthouse 90+ on all four axes

3d

Shipped before

Stack Lighthouse · sharp · bundle analysis

Measure, fix images first (almost always the biggest win), then bundle splitting and caching, then measure again. Trap: capture the before numbers. Without them you cannot prove the work, and unprovable work does not get referred.

From the client Repository access — add hello@brandmintstudios.in as a collaborator

Accessibility audit & fixes

₹30,000

WCAG AA pass

3d

Shipped before

Stack axe-core · manual keyboard pass · computed contrast

Automated scan, then a manual keyboard and screen-reader pass, then COMPUTE every interactive contrast ratio. Trap: automation finds roughly a third of real issues, and contrast must be calculated — two invisible buttons shipped on this very site by being eyeballed.

From the client Repository access — add hello@brandmintstudios.in as a collaborator

Security & access-rules audit

₹40,000

Every rule tested against the emulator

4d

Shipped before

Built for Brand Mint portal — 21 rules tests

Stack Firebase emulator · rules unit tests · probe suite

Write tests against the real rules in the emulator, prove tenant isolation, probe anonymously for what should be denied, and hand over a written report. Trap: an audit without tests is an opinion. This portal has 21 passing rules tests — that is what makes the service demonstrable rather than describable.

From the client Repository access — add hello@brandmintstudios.in as a collaborator

Catalog

3 services

Product catalog

₹40,000

Browsable products with categories, search and detail pages.

4d

Shipped before

Needs a server

Stack Firestore · Next server components

Take the product model from FreshKart `src/lib/types.ts`. Server-render list and detail, client-side search index under ~500 SKUs, Typesense above that. Trap: capture unit price onto the order line at order time — a later price change must never rewrite history.

From the client Product list: name, category, price, unit · Product photographs · Category structure

Bulk catalog (100+ SKUs)

₹30,000

Import, bulk edit and price-update tooling for a large catalog.

3d

Shipped before

Needs a server

Stack papaparse · Firestore batch writes

CSV in, dry-run diff shown before anything commits, then a batched write with a price-history row per change. Lift the shape from FreshKart admin/prices. Trap: never import without a preview — one bad column silently reprices the whole catalogue.

From the client Catalog as a spreadsheet — one row per SKU · Who maintains prices, and how often they change

Inventory & stock

₹20,000

Stock counts, out-of-stock handling, low-stock alerts.

2d

Shipped before

Needs a server

Stack Firestore transactions

A stock field per SKU, decremented inside the same transaction that writes the order. Trap: read-then-write loses the last unit under concurrency — it must be a transaction, not two operations.

From the client Opening stock per SKU · Low-stock threshold you want alerting on

Commerce

9 services

Cart & cash on delivery

₹40,000

Add to cart, checkout, COD orders. No payment gateway needed.

4d

Shipped before

Needs a server

Stack React context · commerce-core

Lift Tresor's CartContext, persist to localStorage for recovery, and drive every status change through commerce-core's transition(). Trap: recompute the total server-side at checkout. A cart total posted from the browser is a number the customer chose.

From the client Delivery pin codes you serve · COD order value limits, if any · Delivery fee rules

Online payments (Razorpay)

₹40,000

Cards, UPI and netbanking, with webhook reconciliation.

4d

Shipped before

Needs a server

Stack Razorpay Orders API · checkout.js · Vercel /api

Create the order server-side, open checkout with that id, then reconcile in a webhook — verifying the signature with HMAC-SHA256. Port Tresor api/payments/*. Trap: reconcile on the webhook, never the redirect; customers close the tab and the money still arrives.

From the client Razorpay account — add hello@brandmintstudios.in as a team member on your own account · Business PAN and GSTIN for Razorpay KYC · Settlement bank account verified inside Razorpay

They pay directly Razorpay ~2% + GST per transaction

Coupons & offers

₹15,000

Discount codes with limits, expiry and category rules.

1.5d

Shipped before

Needs a server

Stack commerce-core/coupons

Already built and tested — wire the admin CRUD and apply it server-side at checkout. Trap: validate on the server. A discount computed in the browser is a discount the customer sets.

From the client The offers you want to run at launch

GST invoicing

₹30,000

Compliant tax invoices with sequential numbering and PDF download.

3d

Shipped before

Needs a server

Stack commerce-core/gst · serverless PDF

splitGst decides CGST+SGST vs IGST from the state codes; a Firestore transaction issues the sequential number; a serverless function renders the PDF. Trap: invoice numbers must never skip or repeat — that is a filing problem, not a bug.

From the client GSTIN, registered legal name and address · HSN/SAC codes for what you sell · Invoice series prefix

Abandoned cart recovery

₹25,000

Detects abandoned carts

2.5d

Adjacent — low risk

Needs a server

Stack cart events · scheduled recovery

Mark carts idle after an agreed window, send a recovery message, attribute recovered revenue so the feature can prove itself.

Trap: one message, not a sequence. Three is spam and gets the sending domain flagged.

From the client How long before a cart counts as abandoned · Approved message wording

Loyalty & rewards

₹40,000

Points on purchase

4d

Adjacent — low risk

Needs a server

Stack points ledger · redemption at checkout

An append-only ledger — never a mutable balance field — with redemption applied server-side. Trap: an append-only ledger is what lets you answer 'why do I have these points', which is the only support question this feature generates.

From the client Earn and burn rules · Expiry policy

Subscriptions & repeat orders

₹50,000

Recurring order schedules

5d

Adjacent — low risk

Needs a server

Stack Razorpay eMandate · scheduler

Plans, a mandate per customer, a scheduler creating orders, plus pause, skip and cancel. Trap: build pause and skip on day one. Without them the only self-service option is cancel.

From the client Delivery frequencies you support · Recurring payments (eMandate) switched on in Razorpay — request it from their support. Access comes with the payments feature.

They pay directly Razorpay recurring mandate fees

Point of sale / counter billing

₹50,000

Counter billing screen

5d

Shipped before

Needs a server

Built for FreshKart (admin/pos)

Stack offline-first queue · thermal receipt printing

Counter screen with an offline-tolerant queue sharing stock with the online store. Extract from FreshKart admin/pos. Trap: the till must keep working when the internet does not — queue locally and sync.

From the client Counter hardware and printer model · Who operates the till

Multi-vendor marketplace

₹1,50,000

Vendor onboarding and storefronts

15d

Adjacent — low risk

Needs a server

Built for B2Bmandi

Stack vendor accounts · order splitting · commission ledger

Vendors onboard to their own storefront, orders split per vendor, commission accrues to a ledger, payouts run on a schedule.

Trap: settle the commission model in writing before building. Changing it later rewrites the ledger and every historical payout.

From the client Commission model · Who approves a vendor · Payout schedule

Fulfilment

3 services

Order management

₹30,000

Admin console to move orders through the pipeline.

3d

Shipped before

Needs a server

Stack commerce-core state machine · admin queue

One admin screen over `transition()`. Every move is validated, every move is logged. Trap: never assign `order.status` directly — that is exactly how a cancelled order got marked shipped in one app and not the other.

From the client Your fulfilment stages, in order · Who processes orders

Delivery & tracking

₹30,000

Courier integration and a customer-facing tracking page.

3d

Shipped before

Needs a server

Stack one aggregator (Shiprocket / Delhivery) · webhook

Push the shipment, store the AWB on the order, take status back by webhook, show a customer tracking page. Trap: integrate ONE aggregator. Two doubles the surface and halves the reliability.

From the client Courier or aggregator you use — add `hello@brandmintstudios.in` as a user · Pickup address and cut-off times

They pay directly Courier aggregator, per shipment

Returns & refunds

₹40,000

Customer return requests, your approval queue, refund back to source.

4d

Shipped before

Needs a server

Stack FreshKart `returns.ts` · Razorpay refunds API

Customer raises a request against a delivered order, it lands in an approval queue, approval triggers the refund. Trap: refunds must be idempotent — a double-click must not refund twice.

From the client Your written returns policy and window · Who approves a return · Restocking rules, if any

Support

4 services

Chat support

₹30,000

In-site chat with an inbox and office-hours handling.

3d · +₹10,000/mo

Shipped before

Needs a server

Stack Firestore conversations · admin inbox (or Crisp)

Widget writes to a conversation collection, admin inbox reads it live, availability rules handle out-of-hours. Hosted is fine if they have a preference. Trap: set office hours in the product or you have silently promised 24/7.

From the client Who answers, and during which hours · Chat provider account, if you have a preference — add hello@brandmintstudios.in as a user on your own account

They pay directly Chat provider, if a hosted one is chosen

Automated replies

₹30,000

Answers common questions automatically, escalates the rest.

3d · +₹5,000/mo

Shipped before

Needs a server

Stack intent match · LLM fallback · escalation

Match the top questions first and only fall through to an LLM when nothing matches — cheaper, faster, and far more predictable. Trap: log every automated reply. Without an audit trail you cannot answer 'what did it tell my customer'.

From the client Your top questions and the answers you want given · What must always reach a human

They pay directly LLM API usage, metered

Email & SMS notifications

₹20,000

Order, shipping and payment notifications to customers.

2d

Shipped before

Needs a server

Stack Resend (email) · MSG91 (SMS India) · queue

Templates in code, a dispatch queue in Firestore, a serverless worker sending and recording delivery. Trap: Indian SMS needs DLT registration and pre-approved templates — start that paperwork in week one, it is not a code task.

From the client Sending domain — add hello@brandmintstudios.in to your DNS or email provider · Approved message wording

They pay directly Email sending ~₹0.10/mail · SMS ~₹0.20/message

WhatsApp order notifications

₹30,000

Order and shipping updates on WhatsApp

3d

Adjacent — low risk

Needs a server

Stack Meta WhatsApp Business API via a BSP

Register templates with Meta, send through the BSP, handle delivery receipts and opt-outs. Trap: template approval takes days and rejections are common — submit before you need them, and never send outside an approved template.

From the client WhatsApp Business account — add hello@brandmintstudios.in as a user in Meta Business Suite · Approved message templates (Meta reviews these)

They pay directly WhatsApp Business API, per conversation

Content & media

5 services

Image system

₹20,000

Automatic compression, modern formats and consistent crops.

2d

Shipped before

Stack sharp / next-image · AVIF + WebP

One pipeline: source at max resolution, generate responsive sizes, serve modern formats with a blur placeholder. Trap: get originals at the highest resolution available up front. You cannot un-compress what the client sent from WhatsApp.

From the client Source images at highest available resolution · Crop ratio and background preference

Video system

₹40,000

Generated product and brand video, hosted and embedded.

4d · +₹10,000/mo

Shipped before

Needs a server

Stack Remotion or ffmpeg · serverless render

Compose programmatically, render on a queue, host and embed. Trap: Remotion is free at your size but needs a paid company licence above three people — plan for it before it is a surprise invoice.

From the client Higgsfield account — add hello@brandmintstudios.in as a user on your own account · Brand assets and any script or shot direction · Written confirmation you hold rights to all source material

They pay directly Higgsfield or equivalent, per render

Brand system + working brand book

₹2,00,000

Mark, wordmark, monogram, favicon

20d

Shipped before

Built for The Green Team, Tresor Couture, BRANDMINT

Stack Figma · design tokens · a brand book site

Three directions, narrow to one, then export tokens and ship the brand book as a working site rather than a PDF. Trap: agree who signs off the direction before you present. Design by committee doubles every round.

From the client Competitor set you admire · Who signs off the direction

Short-form video pack

₹25,000

4 short-form videos per month

2.5d · +₹25,000/mo

Adjacent — low risk

Stack ffmpeg / Remotion · caption layer

Edit pipeline, caption layer synced to speech, export at each platform's aspect ratio. Trap: sell a COUNT — four reels — never 'social media'. This is the easiest service to over-deliver and the hardest to bound.

From the client Source footage or product access · Written confirmation you hold rights to all material

Motion graphics & animation

₹40,000

Animated logo sting

4d

Adjacent — low risk

Stack Motion (framer-motion) · MIT

Define motion tokens once — duration, easing, distance — then apply them; do not hand-tune each animation. Trap: honour prefers-reduced-motion or the site is unusable for some visitors and fails accessibility.

From the client Brand assets in vector format · Reference motion you like

Growth

8 services

Instagram integration

₹40,000

Feed on site, scheduled posting, comment and DM auto-reply.

4d · +₹10,000/mo

Shipped before

Needs a server

Stack Meta Graph API · token refresh job

Business account linked to a Page, long-lived token with a scheduled refresh, then feed embed, scheduler and reply automation.

Trap: tokens expire. A refresh job you never wrote is an integration that dies in sixty days.

From the client Instagram Business account linked to a Facebook Page · Add hello@brandmintstudios.in as a user in Meta Business Suite — never send login details · Confirmation you accept Meta's automated-messaging policies

Analytics

₹10,000

Traffic and conversion reporting, privacy-friendly.

1d

Shipped before

Stack Vercel Analytics or Plausible

Instrument the five events that matter, not everything. Trap: decide those five with the client first, or you will build a dashboard nobody opens.

From the client Which events matter to you

SEO & structured data

₹15,000

Schema markup, sitemaps and per-page metadata.

1.5d

Shipped before

Stack JSON-LD · Next metadata API · sitemap

Structured data per page type, generated sitemap, per-page metadata. Trap: schema that does not match visible page content is a manual action from Google, not a ranking boost.

From the client Target keywords, if you have them

Ask-your-documents (RAG)

₹1,00,000

Answers grounded in your own documents

10d

Adjacent — low risk

Needs a server

Stack embeddings · pgvector or Firestore vector · promptfoo

Ingest, chunk, embed, retrieve, answer WITH citations back to the source. Build the eval suite alongside, not after. Trap: an answer without a citation cannot be checked, and an unverifiable answer is worse than no answer.

From the client The document set, and who owns it · Who may ask questions of it

They pay directly LLM API usage, metered · Vector store hosting

Invoice & document extraction

₹80,000

Structured data out of invoices, POs and bills

8d

Adjacent — low risk

Needs a server

Stack LLM structured output · confidence routing

Extract to a strict schema, route anything low-confidence to a human queue, export to their accounting tool. Trap: get 50 real sample documents before quoting. Invoice layouts vary far more than anyone expects.

From the client 50 sample documents · The fields you need extracted · Accuracy you will accept

They pay directly LLM API usage, per document

Lead qualification agent

₹50,000

Qualifies inbound enquiries against your rubric

5d

Adjacent — low risk

Needs a server

Stack LLM rubric · calendar API

Intake form, LLM scores against the written rubric, qualified leads book straight into the calendar, everything uncertain escalates. Trap: write the rubric down first — you cannot automate a judgement nobody has articulated.

From the client Your qualification rubric · Calendar access — add hello@brandmintstudios.in as a user

They pay directly LLM API usage, metered

Voice agent — inbound calls

₹80,000

Answers the phone

8d

Needs discovery first

Needs a server

Stack Exotel/Twilio · STT · LLM · TTS

Telephony in, speech to text, an LLM turn, speech back, with a clean handoff to a human. Sell a paid discovery day FIRST. Trap: latency is the product — over roughly a second of silence and callers hang up. Recording consent is a legal requirement, not a setting.

From the client Phone number and telephony provider — add hello@brandmintstudios.in as a user · What it may and may not say · Who it hands off to, and when · Written consent to record calls, per Indian law

They pay directly Telephony per minute · Speech-to-text and text-to-speech per minute · LLM per call

Internal copilot over your tools

₹1,50,000

Answers questions across your own systems

15d

Needs discovery first

Needs a server

Stack tool registry · planner · audit log

Register the tools it may call, plan, execute, and log everything. Discovery day first. Trap: define what it may NEVER do without a human before you define what it can do.

From the client Which systems it may read · What it may never do without a human

They pay directly LLM API usage, metered

Business platforms

4 services

CRM / pipeline

₹1,00,000

Contacts and companies

10d

Shipped before

Needs a server

Built for REAL-ESTATE-CRM, MODEX

Stack Next.js · Firestore · shared admin shell

Contacts, a drag-and-drop pipeline, an activity log. Extract from REAL-ESTATE-CRM. Trap: model their pipeline stages, not a generic one. A CRM that does not match how they sell will not be opened twice.

From the client Your pipeline stages, in order · What counts as a qualified lead

HR / attendance / payroll inputs

₹1,20,000

Employee records

12d

Shipped before

Needs a server

Built for Modcon-HR

Stack Next.js · Firestore · payroll export

Employee records, attendance, leave, and an export their payroll provider actually accepts. Extract from Modcon-HR. Trap: confirm the payroll export format on day one — it is the only deliverable that must be byte-correct.

From the client Leave policy · Attendance method (app, biometric, manual) · Payroll provider you export to

Approvals & workflow engine

₹80,000

Multi-step approval chains

8d

Adjacent — low risk

Needs a server

Stack state machine · role routing · audit trail

Chains defined as data, not code, so a rule change is configuration. Trap: build escalation from the start. Approvals that stall with no timeout become the reason people go back to email.

From the client Who approves what, and in what order · Escalation rules

Reporting dashboard

₹50,000

The numbers you actually review

5d

Shipped before

Needs a server

Built for FreshKart (admin/reports), InventoryManager

Stack Firestore aggregation · scheduled exports

Pre-aggregate the numbers they review weekly; do not compute them per page load. Extract from FreshKart admin/reports. Trap: ask which five numbers they check on a Monday and build exactly those.

From the client Which five numbers you review weekly
