

Brand Mint

Operations manual — admin, client and quotation

Every screenshot is the real application, captured from the actual pages. Data shown is representative seed data.

1. Super admin — running the studio
2. Creating a client login
3. Proving tenant isolation
4. Quoting a job
5. What the client sees
6. The skeleton and the feature catalogue

1 · Super admin — running the studio

You sign in at `/login` with `admin` and land on `/studio`. Everyone else lands on `/portal`.

SIGNED MRR

Rs 12,500

Rs 87,500 short of break-even (Rs 1,00,000/month) · plus Rs 12,500/mo in kind, not counted

OPEN LEADS

3

3 open of 3 total

MEDIAN FIRST RESPONSE

47m

2 recorded · market median ~42h · 1 still awaiting

The three numbers that decide the month. MRR counts cash only — compensation in kind is shown but never summed, because this gauge answers "can I cover this month".

Leads — and the one button that matters

Market median first response is about 42 hours. Under five minutes makes qualification roughly 21× more likely. Log the lead when it arrives, then press **Log first response** the moment you reply. It stamps once and can never be edited — a number you can move afterwards stops meaning anything.

PLAN VS ACTUAL

Funnel & mix against the playbook

Targets come from the sales playbook. Actuals are computed from the leads above — where there is no data, this says so rather than printing a zero.

STAGE CONVERSION

Any single channel above 50% makes the pipeline fragile.

LOSS REASONS

No lost deals recorded yet.

Leads. A lead with no reply yet shows a live waiting time, red past five minutes.

Delivery health

Empty is not the same as done

A project with no milestones reads “*No milestones yet*” in grey — never green, never “All complete”. “All complete” is reserved for projects that actually have milestones and none are outstanding.

Inventory Manager	Shopify storefront launch Due 22 Aug 2026	Brand Mint	5d
Green Basket	COD checkout build Due 31 Jul 2026	Brand Mint	9d
Tresor Couture	No milestones yet	—	Not set up
Modcon HR	No milestones yet	—	Not set up

Who each project is waiting on, and how old the oldest blocker is.

Managing a project

Set the project type to unlock its milestone template, then stamp it from a start date *you* choose — no schedule is ever invented.

Green Basket

2 · Creating a client login

This is a two-part job — both parts are required

Firebase creates the password. `/studio` creates the permissions. Do only the first and the client signs in perfectly, sees “No active project”, and messages you — which is the exact cost this portal exists to remove.

Part A — Firebase Console

1. Authentication → Users → **Add user**
2. Email: the synthetic address, e.g. `greenbasket@brandmintstudios.in` — not their real email. The panel below shows you the exact string.
3. Set a password **here**. This is the only place it will ever exist.
4. **Copy the UID** from the new row.

Part B — `/studio` → Client Access

5. Paste the UID, pick the organisation, enter name and username, Save.

Username

greenbasket

Signs in as username@brandmintstudios.in

Display name

Green Basket

Organisation

Brand Mint Studios

Firebase Auth UID

paste the UID from the console

Save

The Client Access panel. It takes a UID — there is no password field anywhere in this application except the client's own login screen.

Why Part B is not optional

The security rules resolve a client's organisation by reading `users/{uid}`. With no such document that client can read *nothing* — not their org, not their project, not their invoices.

Never

- Never type a client's password into any Brand Mint screen.
- Never ask a client for a password, API key or token for their own systems. Access is always “*add hello@brandmintstudios.in as a user on your own account*”. Every requirement the quote tool prints is already worded that way.

3 · Proving tenant isolation

Do this once, the first time you create a client. Sign in as that client in a private window and open `/tenancy-check` . The page reads every known organisation and project directly — it has no allow-list of its own, so the security rules alone decide every row.

Brand Mint

TENANCY CHECK

greenbasket@brandmintstudios.in · greenbasket

Sign out

VERDICT

Isolated

This client can read only greenbasket and its own projects. Every other tenant returned permission-denied — enforced by rules, not by the interface.

HOW TO READ THIS

This page reads every known organisation and project id directly, as whoever is signed in right now. Rules are the only thing deciding each result — this page has no allow-list of its own. Signed in as a client, exactly one organisation and its own projects should say **allowed** and everything else must say **denied**. Signed in as the admin, everything is allowed and that is expected, which is why this test only proves anything from a client session.

ORGANISATIONS

ORGANISATION ID	RESULT	DETAIL
brandmint	denied — correct	permission-denied
inventory	denied — correct	permission-denied
greenbasket	allowed	read ok
tresor	denied — correct	permission-denied
modcon	denied — correct	permission-denied
simplysip	denied — correct	permission-denied

PROJECTS

PROJECT ID	RESULT	DETAIL
inventory-project	denied — correct	permission-denied
greenbasket-project	allowed	read ok
tresor-project	denied — correct	permission-denied
modcon-project	denied — correct	permission-denied
simplysip-project	denied — correct	permission-denied

Run as Green Basket. Their own org and project are readable; every other tenant is denied — and the denials are green, because for another tenant's data a denial is the pass condition.

Colour follows correctness, not success

A red “denied” would report correct behaviour as a failure. The page colours by whether the result is what isolation requires.

Run the same page as admin and it refuses to claim a pass:

VERDICT

Inconclusive — signed in as admin

The admin is allowed to read everything by design, so this run proves nothing about isolation. Sign in as a client and reload this page to get a real verdict.

As admin the verdict is "Inconclusive". The admin sees everything by design, so a green tick here would prove nothing.

4 · Quoting a job

Two ways in. The command line is fastest for you; the page produces the document you send.

From the command line

Presets

static-brochure	₹60,000	Static brochure site
dynamic-site	₹1,05,000	Dynamic website
catalog-only	₹1,45,000	Catalog site (browse, no checkout)
commerce-cod	₹2,40,000	Store – cash on delivery
commerce-full	₹6,16,000	Store – online payments, returns, invoicing
commerce-platform	₹11,60,000	Commerce platform – everything, with support and growth

Quote a shape and it prints the price, the architecture decision, what to ask the client for, and the internal build checklist:

Store – cash on delivery
Standard – up to 200 products, small team

SCOPE

Dynamic website	₹50,000	5d
Deployment & domain setup	₹10,000	1d
Product catalog	₹40,000	4d
Inventory & stock	₹20,000	2d
Cart & cash on delivery	₹40,000	4d
Order management	₹30,000	3d
Email & SMS notifications	₹20,000	2d
Image system	₹20,000	2d
Analytics	₹10,000	1d

PRICE

Build	₹2,40,000	24d
One-off	₹2,40,000	
GST @ 18%	₹43,200	
Total incl. GST	₹2,83,200	

50% to start, 50% at launch. GST extra at 18%.
30-day bug warranty. 2 review rounds included, ₹15,000 each after.

ARCHITECTURE

Needs serverless functions – this cannot be a static site.
Required by: Dynamic website, Product catalog, Inventory & stock, Cart & cash on delivery, Order management, Email & SMS notifications

THIRD-PARTY COSTS – client pays these directly, not us

- Vercel (free tier usually sufficient)
- Domain registration ~₹1,000/yr
- Email sending ~₹0.10/mail
- SMS ~₹0.20/message

Dependencies are priced for you

Quote a checkout and it silently adds the catalogue and the site underneath it, and prices all three.
Quoting a checkout without the catalogue under it is how a fixed price loses money.

From /studio → Scope & quote

1 · BUILD THE SCOPE

What are we quoting?

Client / organisation

Green Basket

Base service

Custom website — from Rs 2,00,000

Published floor: Rs 2,00,000. Verified against the live site and the service catalog.

COMMERCE

- ☒ **Cash on delivery**
COD checkout without a payment gateway · Order confirmation screen · Admin order list
- ☒ **Online payments (Razorpay)** **needs a server**
Cards, UPI and netbanking checkout · Payment webhook and reconciliation · Refund initiation from admin
- ☒ **Returns & refunds** **needs a server**
Customer-initiated return request · Return approval queue for you · Refund trigger back to the gateway
- ☐ **GST invoicing** **needs a server**
GST-compliant invoice per order · Sequential invoice numbering · PDF download and email
- ☐ **Inventory management**
Stock count per product · Out-of-stock handling at checkout · Low-stock view for you
- ☐ **Fulfilment & order tracking** **needs a server**
Order status pipeline · Customer-facing tracking page · Courier AWB capture

SUPPORT & COMMS

- ☒ **Chat support** **needs a server**
In-site chat widget · Conversation inbox · Office-hours and away handling
- ☐ **Email & SMS notifications** **needs a server**
Order and shipping notifications · Templated sender identity · Delivery/failure log

CONTENT & MEDIA

- ☐ **Image system**
Responsive image pipeline · Automatic compression and modern formats · Consistent product crops
- ☐ **Video system (Higgsfield)** **needs a server**
Generated product/brand video · Hosting and playback · Repeatable render pipeline

AUTOMATION

- ☐ **Automated replies** **needs a server**
Auto-response to common questions · Escalation to a human on no-match · Reply log you can audit
- ☐ **Instagram integration** **needs a server**
Feed embed on site · Scheduled posting · Comment and DM auto-reply

PLATFORM

- ☐ **Analytics dashboard**
Traffic and conversion view · Privacy-friendly, no cookie banner needed · Monthly summary
- ☐ **Multi-language**
Language switcher · Translated content model · Per-language SEO tags
- ☐ **Play Store APK**
Installable Android build of the web app · Store listing assets · Submission support

Tick what they are buying. Anything needing server-side code is flagged here — at quote time, not discovered mid-build.

Cash on delivery	Price	one-off ▼	Days	no price set
Online payments (Razorpay)	40000	one-off ▼	4	
Returns & refunds	40000	one-off ▼	4	
Chat support	30000	one-off ▼	3	

Add-on prices are yours to set, once. A feature with no price refuses to quote rather than guessing.

The document you send

Scope of work

Green Basket · prepared by Brand Mint Studios

WHAT YOU GET AT THIS PRICE

- Custom website — as scoped below
- Cash on delivery
- Online payments (Razorpay)
- Returns & refunds
- Chat support

INVESTMENT

Cannot be quoted yet — 1 selected feature has no price set: Cash on delivery. Set them in section 2. This document is not sendable until then.

WHAT WE NEED FROM YOU

- Cash on delivery: Delivery pin codes you serve
- Cash on delivery: COD order value limits, if any
- Online payments (Razorpay): Razorpay account — add hello@brandmintstudios.in as a team member on your own account
- Online payments (Razorpay): Business PAN and GSTIN for Razorpay KYC
- Online payments (Razorpay): Settlement bank account already verified inside Razorpay
- Returns & refunds: Your written returns policy and window
- Returns & refunds: Who approves a return
- Returns & refunds: Restocking rules, if any
- Chat support: Chat provider account if you have a preference — add hello@brandmintstudios.in as a user
- Chat support: Who answers, and during which hours

Never send us a password. For anything that needs access, add hello@brandmintstudios.in as a user on your own account.

WHAT IS FREE AFTER LAUNCH

Bugs — anything that does not behave as specified in this document — are fixed free for 30 days after launch.

2 review rounds are included during the build.

WHAT COSTS EXTRA

- Design changes after sign-off
- New integrations not listed below
- Additional pages, screens or features
- Review rounds beyond the two included

Any of the above requires either a new fixed-scope contract or an open retainer. We will quote before starting, never after.

Review rounds beyond the 2 included are Rs 15,000 each.

NOT INCLUDED

Anything not listed under "What you get at this price" above is out of scope. That is not a refusal — it is a separate quote, and we would be glad to give you one.

Print / save as PDF

What is included, the investment, what we need from them, what is free after launch, and what costs extra. Print to PDF and attach it to the SOW.

FREE	CHARGEABLE
Anything not behaving as specified, for 30 days after delivery	Design changes after sign-off
2 review rounds during the build	New integrations not in the SOW
	Additional pages, screens or features
	Review rounds 3+ at ₹15,000 each

When they ask for something not in the scope

“Happy to do that. It’s outside the signed scope, so let me send you a quick quote — I won’t start until you’ve approved it.” Then quote it and send the document. Never “just add it”. Never quote after building.

5 · What the client sees

They click **Log in** on the marketing site and type the username you gave them — not an email. The system maps `greenbasket` to `greenbasket@brandmintstudios.in` behind the scenes.

The public site. “Log in” is the client's front door.

Username and password. The only password field in the whole system, and it is the client typing their own.

A login form for the Brand Mint portal. It features a green circular logo at the top, followed by the title "Brand Mint portal" and the instruction "Sign in with the username we gave you." Below this are two input fields: "Username" with the value "greenbasket" and "Password" with masked characters. A "Sign in" button is positioned below the password field. At the bottom, a red error message states "Wrong username or password."

Wrong username and wrong password give the identical message, so nobody can probe which usernames exist.

The portal — five things, never six

A section titled "WHAT WE NEED FROM YOU" with the sub-header "Open items". It contains three items, each with a title, a description, a date, and a status indicator:

Item	Description	Date	Status
Google Play Developer account — add hello@brandmintstudios.in as a user on your own account	access · raised 18 Jul 2026	9d	
Privacy policy URL (required by Google)	content · raised 18 Jul 2026	9d	
COD order value limits, if any	decisions · raised 25 Jul 2026	2d	

"What we need from you" — open items, dated, oldest first. This is the reason the product exists: it does the chasing so you don't have to.

A section titled "WAITING ON YOUR APPROVAL" with the sub-header "Deliverables in review". It contains two items, each with a title, a description, and two action buttons:

Item	Description	Approve	Request changes
COD-only web application v2	Open preview	Approve	Request changes
Play Store APK v1	Open preview	Approve	Request changes

Deliverables waiting on them. One click to approve or request changes.

A client can make exactly two changes

Tick an intake item, and approve or request changes on a deliverable. Nothing else — enforced by the security rules, not by the interface.

 Brand Mint ONBOARDING

Back to portalSign out

The onboarding checklist, grouped Assets / Content / Access / Decisions — carrying the never-send-a-password line.

6 · The skeleton and the feature catalogue

New client builds start from `commerce-skeleton` rather than from nothing. You edit one file — `brand.config.ts` — and the application configures itself. The same feature list drives both the quote and what the app renders, so the price and the product cannot drift apart.

REPOSITORY	WHAT IT IS
<code>commerce-core</code>	Order state machine, coupon engine, India GST validation, money formatting. No UI, no framework, zero dependencies.
<code>commerce-skeleton</code>	Feature registry, pricing model, the quote command, daily CI.

Why they exist

Tresor Couture and FreshKart were the same system built twice. Order status alone: Tresor used `pending / placed / paid / shipped / delivered / cancelled / refunded` ; FreshKart used `PENDING / CONFIRMED / PACKED / SHIPPED / DELIVERED / CANCELLED` . Different states, different casing, and a different model — Tresor folded payment into fulfilment, so an order could not be both paid and shipped. Every fix had to be made twice and drifted apart.

The MSA already protects this

Clause 4.2 — “Studio retains ownership of Studio’s pre-existing tools, methodologies, libraries and internal frameworks.” That is what makes the skeleton legally reusable on every client project. Keep signing it.

Pricing

One rate, one formula: `build days × day rate × scale` . The rate is ₹10,000, derived from Brand Mint's own published prices divided by its own published timelines. Change that one constant and the entire catalogue reprices.

Starting a client

1. Create a repository from the skeleton.
2. `npm run quote` until the scope matches what they are buying.
3. Paste the printed features and scale into `brand.config.ts` , with their name, domain and theme.
4. Push. Vercel builds a preview. Promote when it is right.
