

How the agency runs

One client, from first message to paid — both sides of every step

Deccan Bloom · Growth Store, Rs.2,00,000 · invoiced at Rs.2,36,000

Every page shows the same moment twice. **On the left is Agency OS**, what you see as the studio. **On the right is the client portal**, what they see. Two browsers were held open at once and both were photographed after each move, so the right-hand side is genuinely what the client had in front of them at that point — not a reconstruction.

The studio was emptied first, through the Reset all button, so nothing in these pages belongs to any other client.

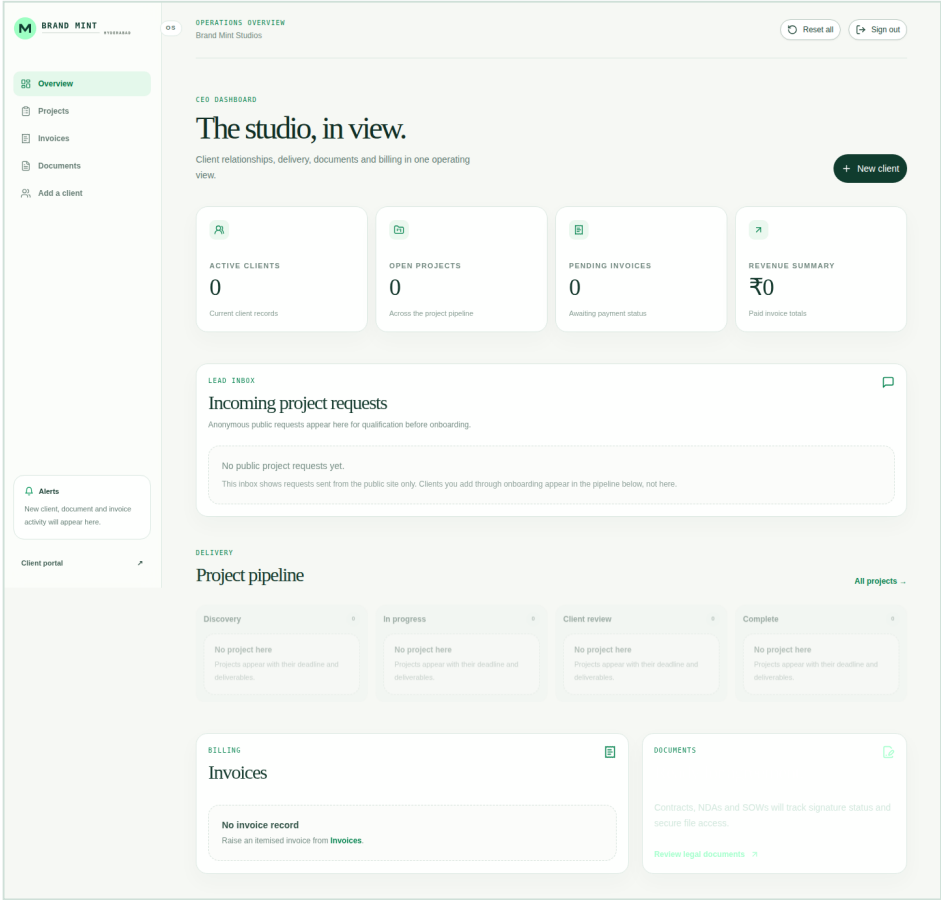

Stage	What has to be true
Lead	A request arrives through the public site. Not yet a client.
Onboarding	Contact recorded, tier chosen, all four policies accepted.
Discovery	Agreement stored, advance paid, kickoff held, access received.
In progress	Weekly demo booked, in-scope features built.
Client review	QA, mobile, forms tested, content checked, balance invoiced.
Complete	Deployed, final payment received, credentials handed over, handover held.

19 steps, each captured on both sides

01. An empty studio

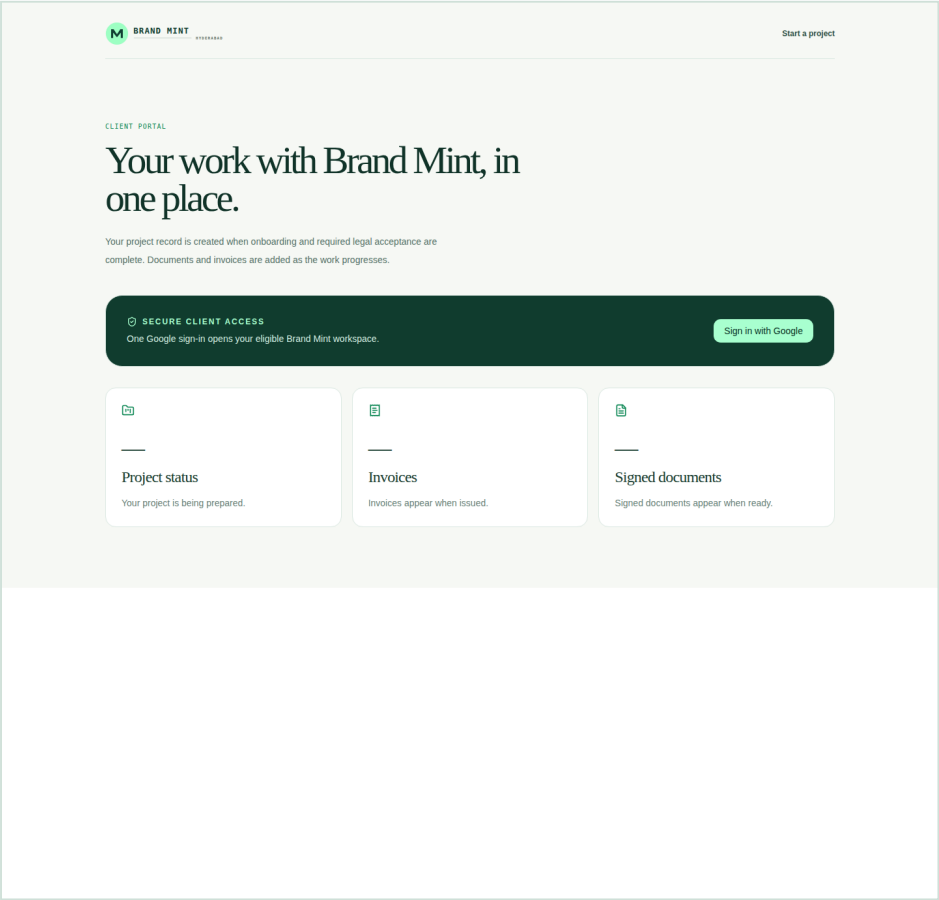

YOU — Agency OS

Reset all has been clicked and confirmed, then the client records cleared too. No projects, no invoices, no clients.

THEM — Client portal

Signed out. There is nothing to see and nothing to sign in to yet.

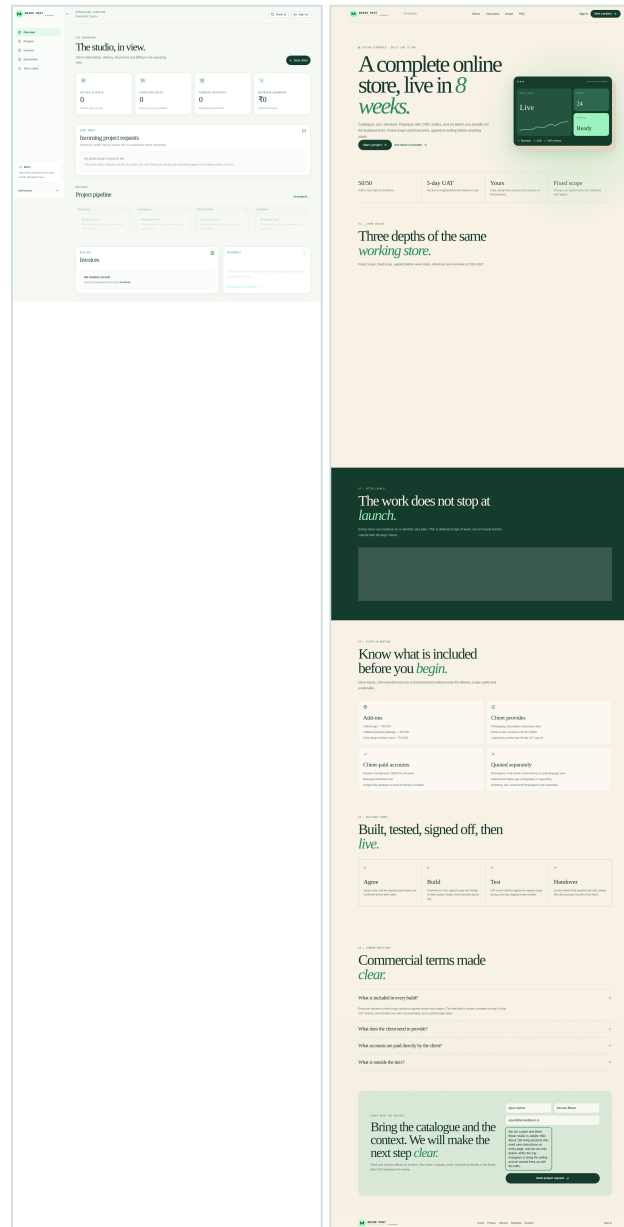

02. The client writes in

YOU — Agency OS

Nothing to do yet — the request has not been sent.

THEM — Client portal

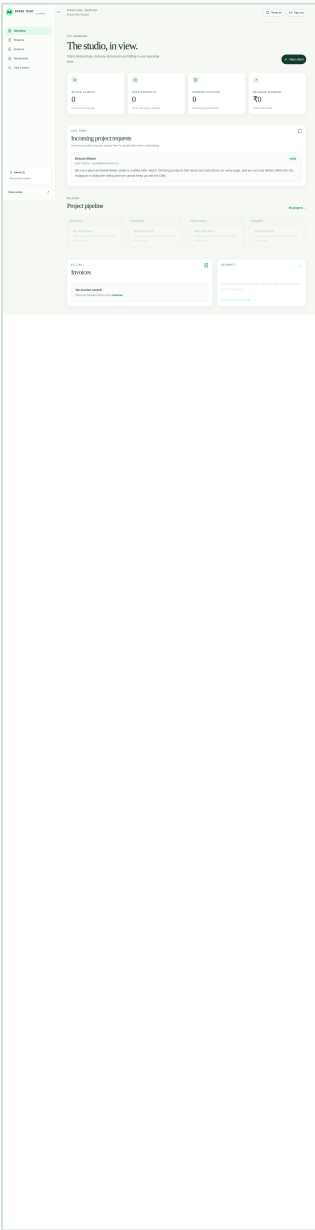

Filling in the enquiry form on the public site. Name, business, email and what they need.

03. The request arrives

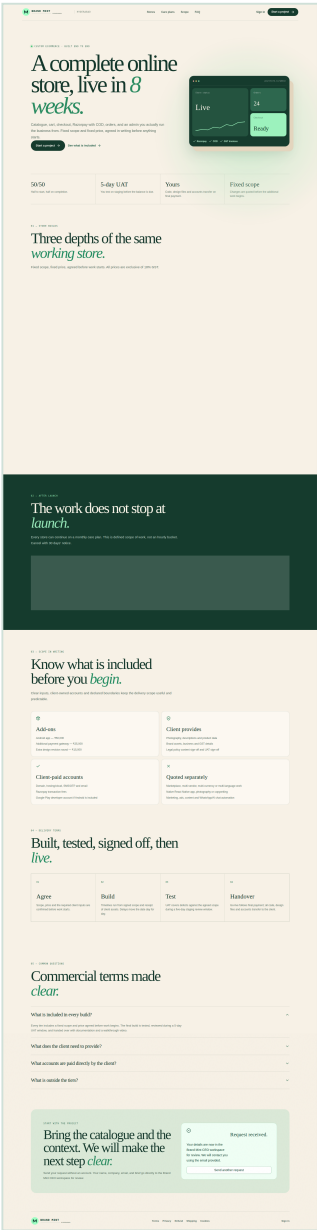

YOU — Agency OS

It appears in the Lead inbox on the dashboard, with the contact details and the full request. This is a lead, not yet a client.

THEM — Client portal

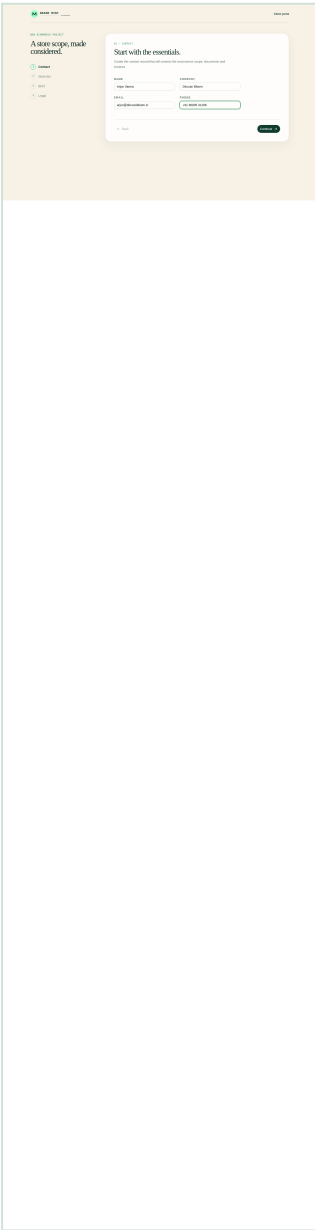

A confirmation. Their part is done until they hear back.

04. Onboarding, step 1 of 4

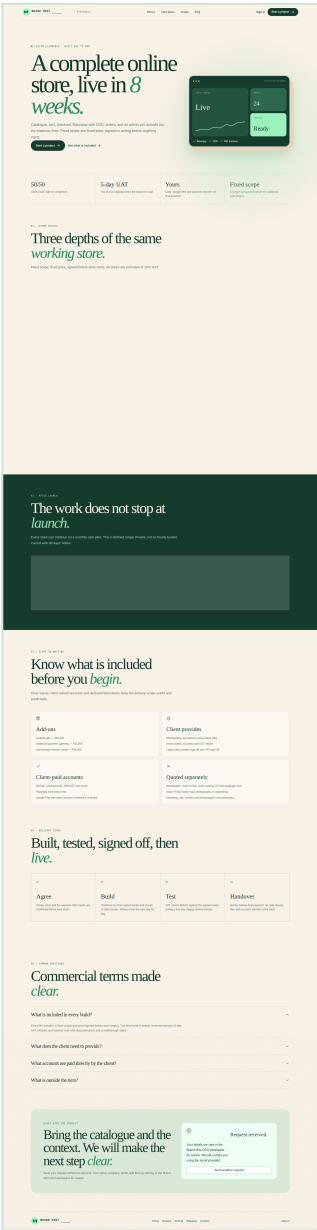

YOU — Agency OS

The CEO opens Add a client and records the contact. This is the step that converts a lead into a client record.

THEM — Client portal

Still just the confirmation — onboarding happens on the studio's side.

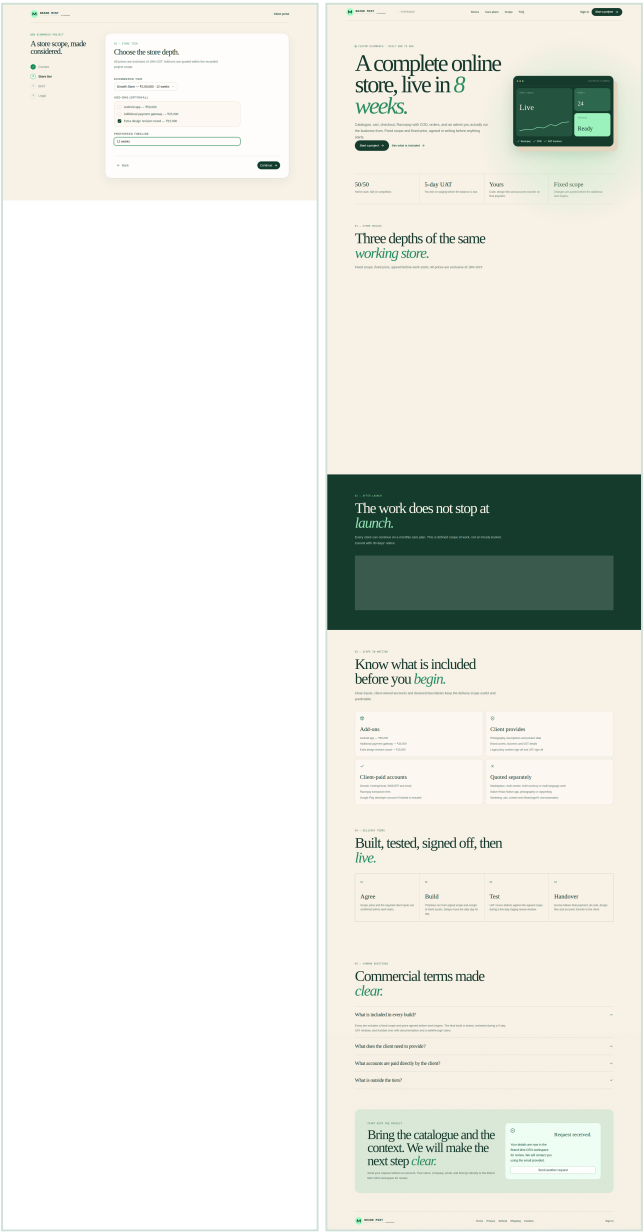

05. Onboarding, step 2 — the tier

YOU — Agency OS

Growth Store at Rs.2,00,000, with an extra design revision round added. The tier sets the project's price.

THEM — Client portal

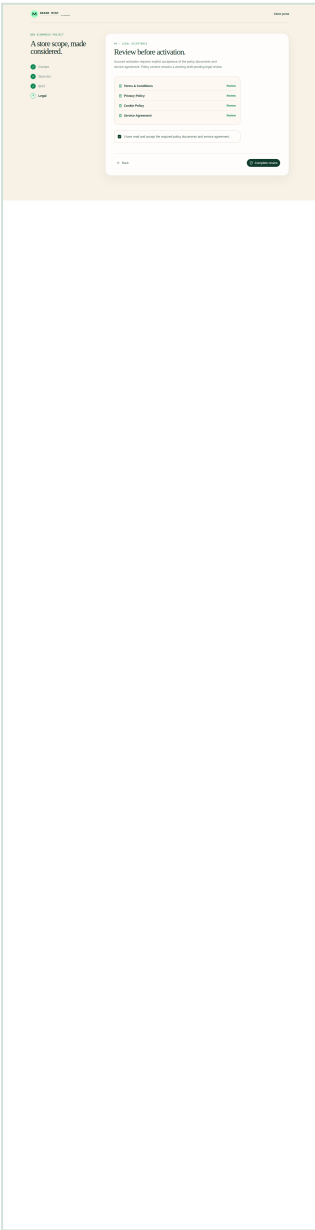

Unchanged.

06. Onboarding, step 4 — acceptance

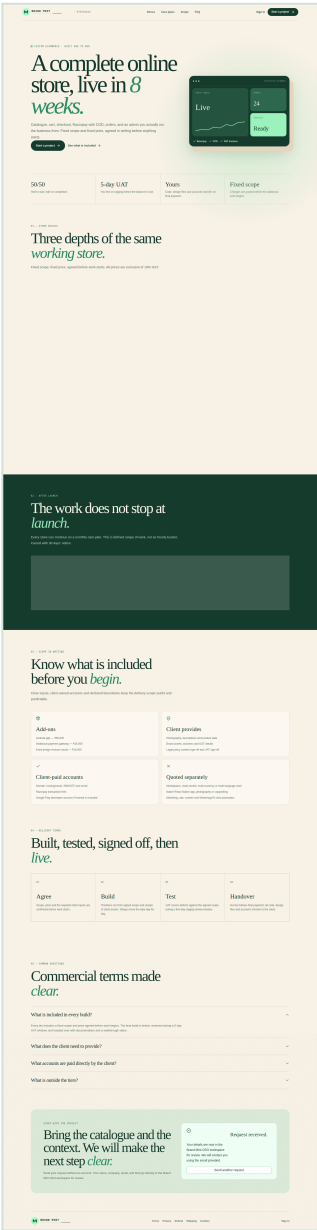

YOU — Agency OS

All four policy documents must be accepted. Complete review stays disabled until the box is ticked — this is a gate, not a formality.

THEM — Client portal

Unchanged. The acceptance recorded here is what will later permit portal access.

07. The client exists

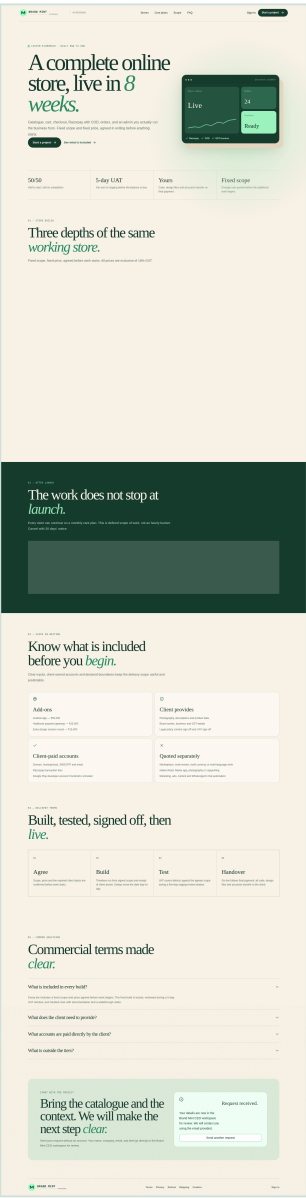

YOU — Agency OS

Confirmation, and the CEO is offered Back to Agency OS. Behind this: a client record, a contact, four legal acceptances, and a discovery project with its checklist already attached.

THEM — Client portal

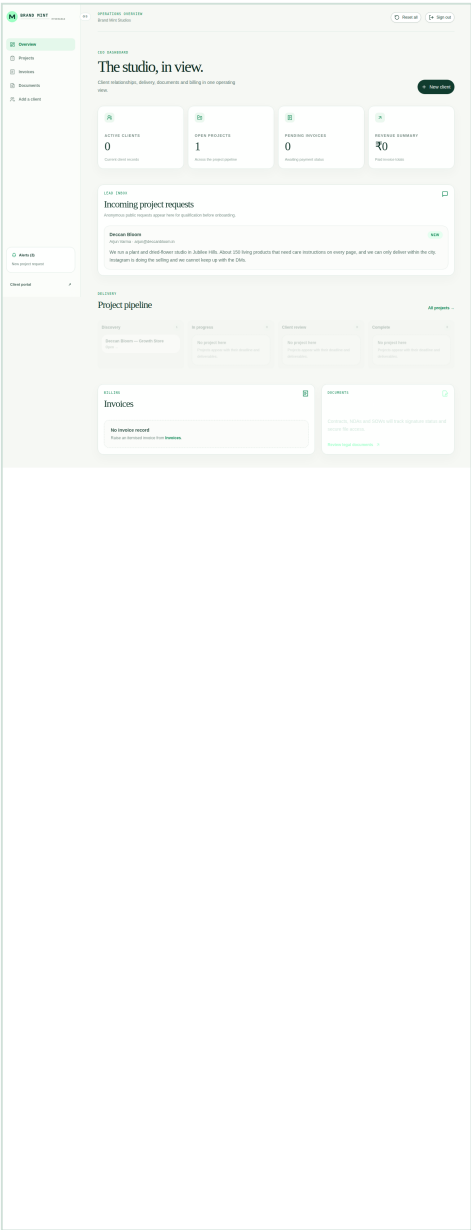

Still nothing — they have not signed in yet.

08. The client signs in

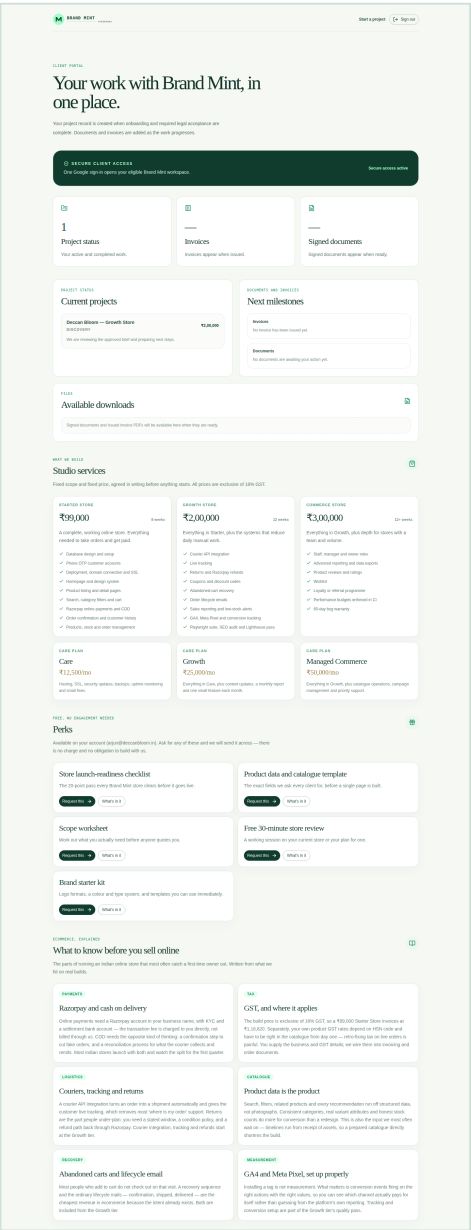

YOU — Agency OS

The dashboard now shows one active engagement in Discovery.

THEM — Client portal

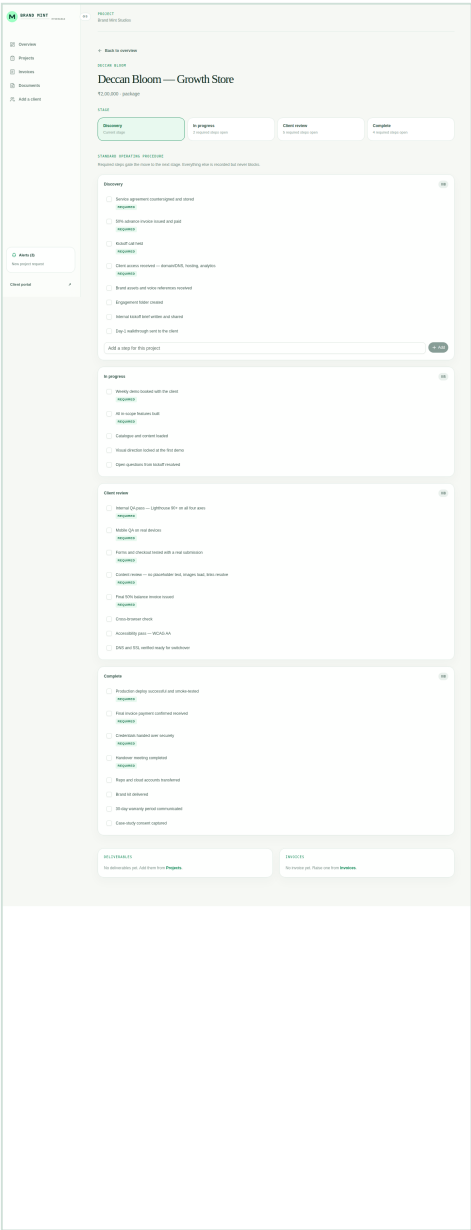

Their project, its stage, and the price. Access was granted by the email matching the contact record, with all four acceptances present.

09. The checklist, untouched

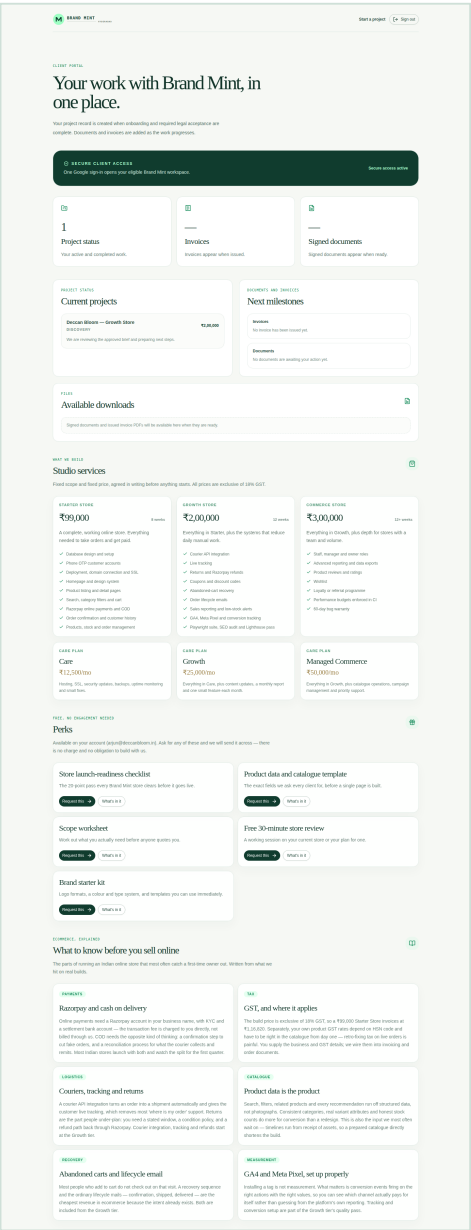

YOU — Agency OS

The project opens with the studio's standard operating procedure attached: four stages, required steps marked. Nothing is ticked yet.

THEM — Client portal

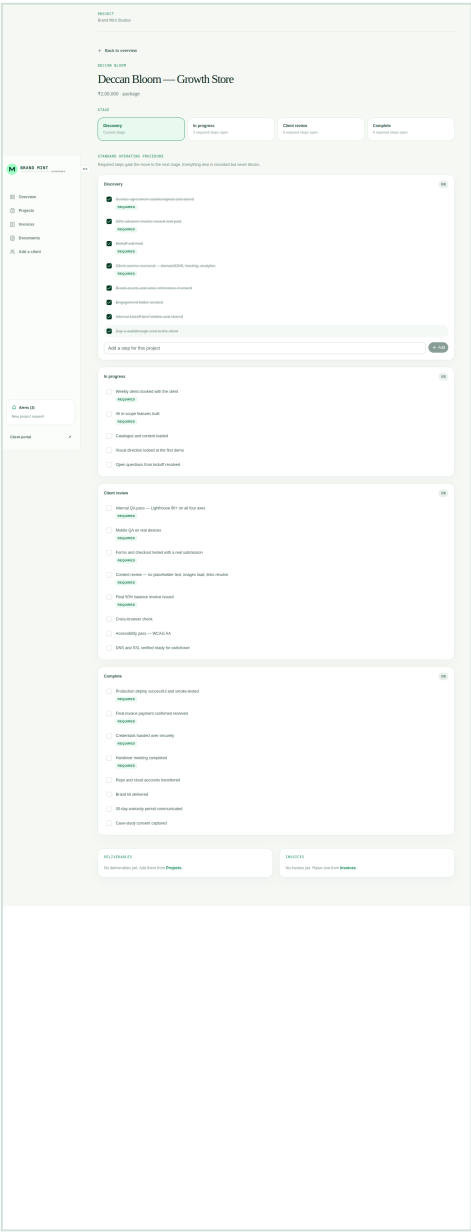

The client sees the stage, not the checklist. The procedure is the studio's business.

10. Discovery is worked through

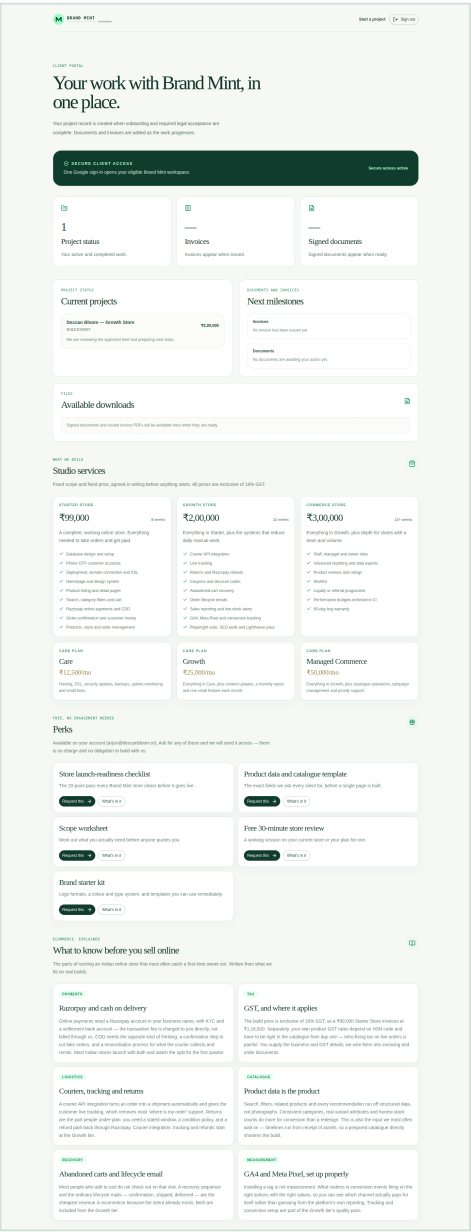

YOU — Agency OS

Every required discovery step ticked — agreement stored, advance invoice, kickoff call, client access received.

THEM — Client portal

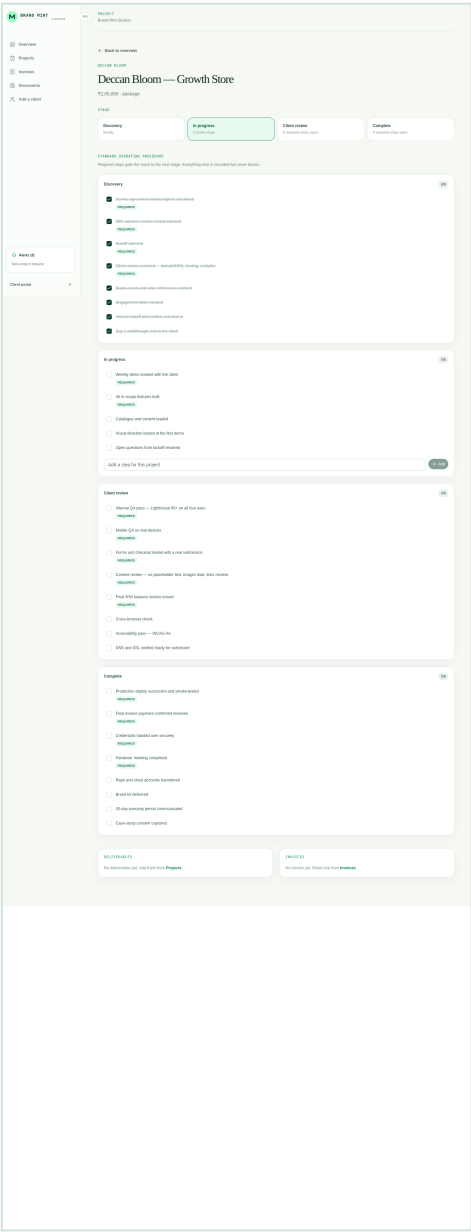

Unchanged. Internal progress is not narrated to the client.

11. The stage moves

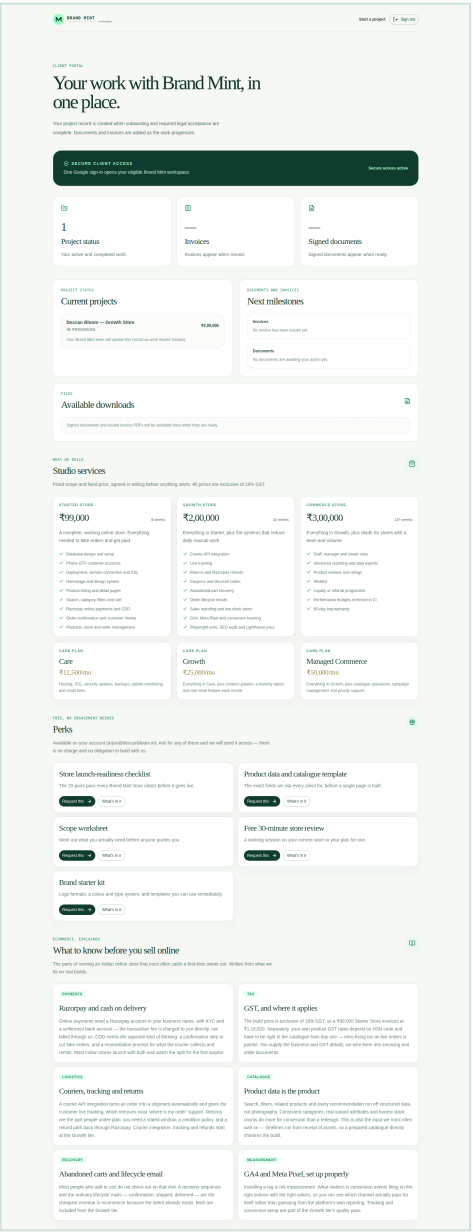

YOU — Agency OS

In progress. The move was only permitted because discovery's required steps were done; otherwise it is refused and the outstanding items named.

THEM — Client portal

The status changes. This is the first thing the client sees from all that work.

12. The plan becomes visible

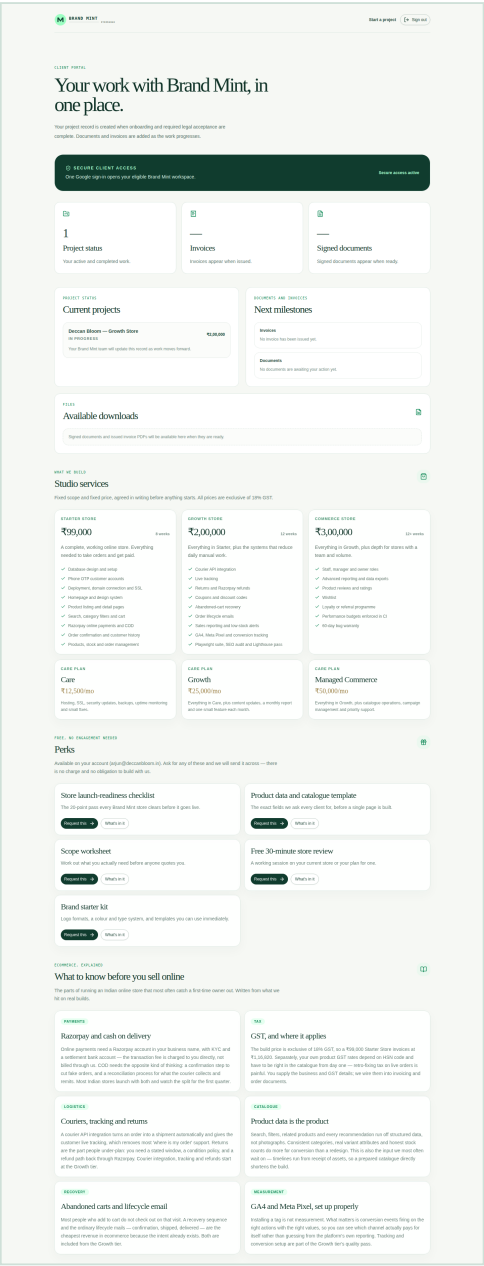

YOU — Agency OS

Three deliverables added against the project.

THEM — Client portal

The client can now see what is actually being built for them, by name.

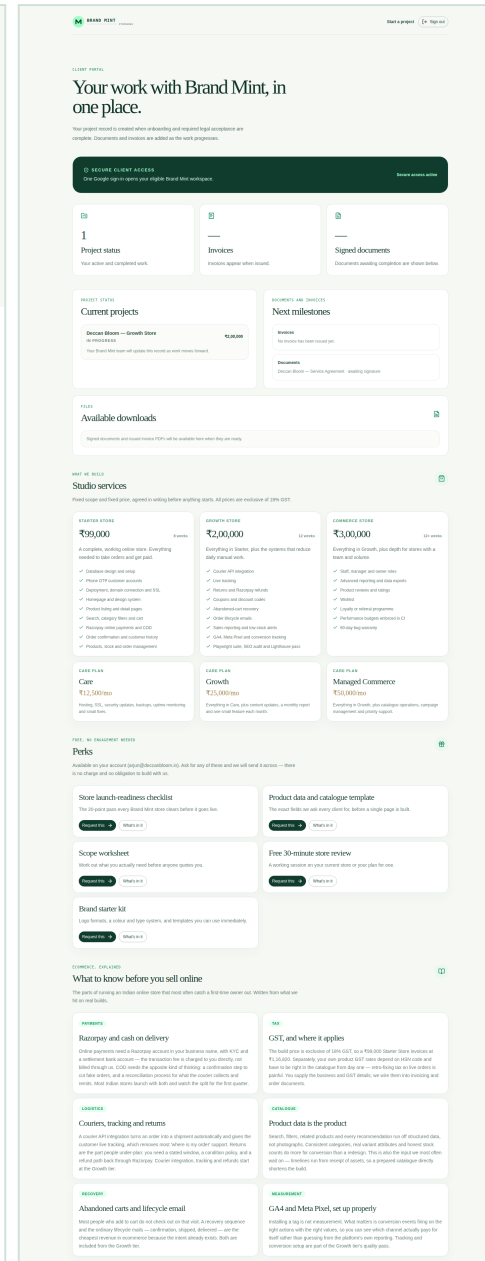

13. The agreement goes out

YOU — Agency OS

A contract record is created and moved to awaiting signature.

THEM — Client portal

It appears in their documents list as needing action.

14. And comes back signed

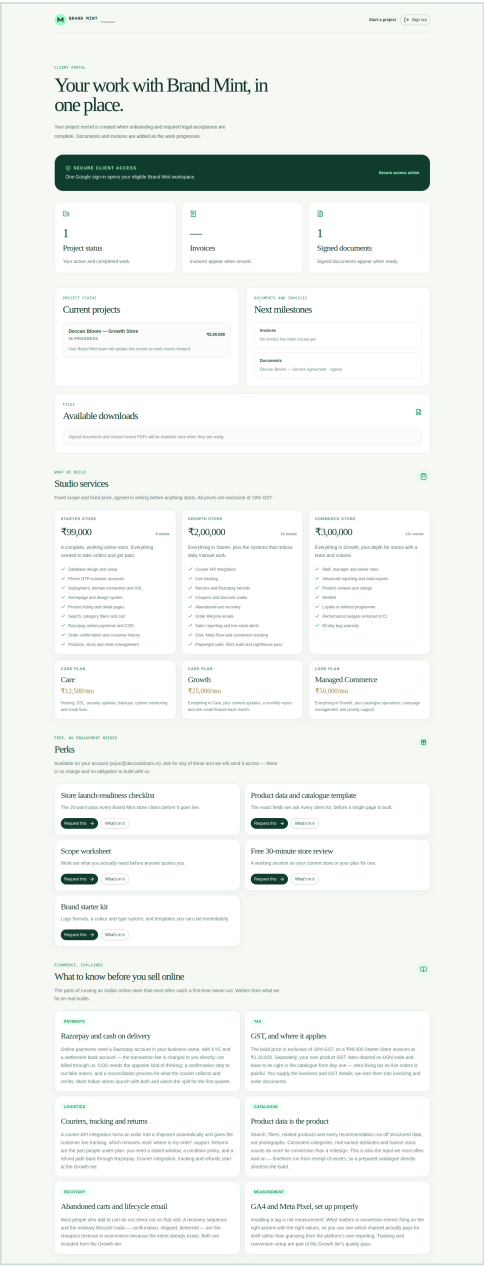

YOU — Agency OS

Marked signed on the studio's side.

THEM — Client portal

The status updates to signed.

15. Preparing the invoice

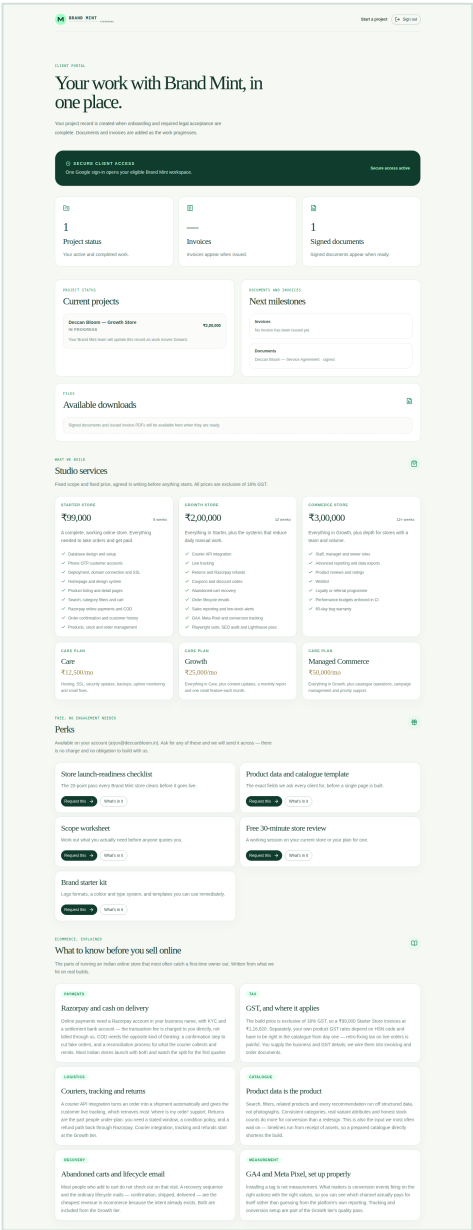

YOU — Agency OS

Choosing the client and project pre-fills the line item and the amount from the project's current price, so the invoice cannot drift from the record.

THEM — Client portal

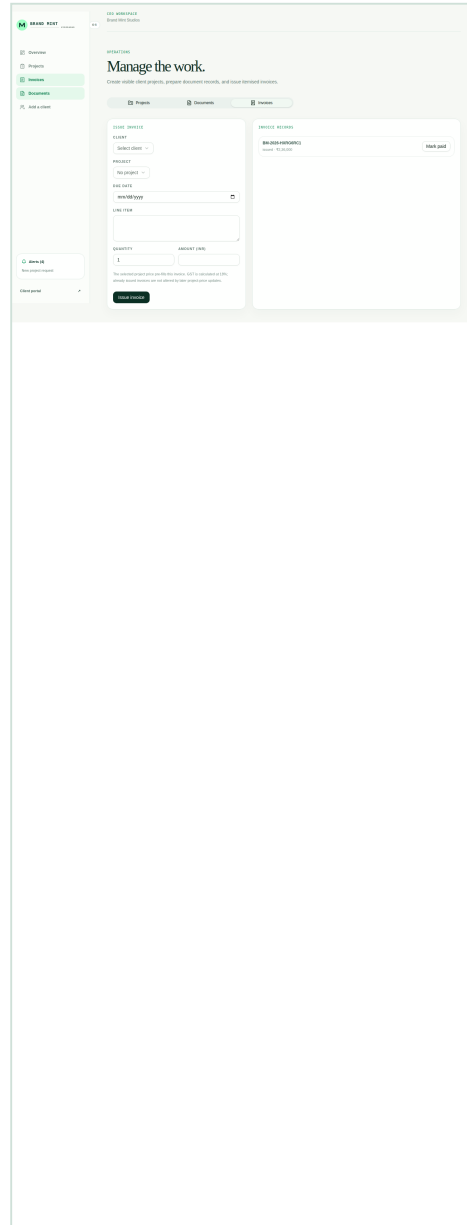

Nothing yet — the invoice has not been issued.

16. The invoice is issued

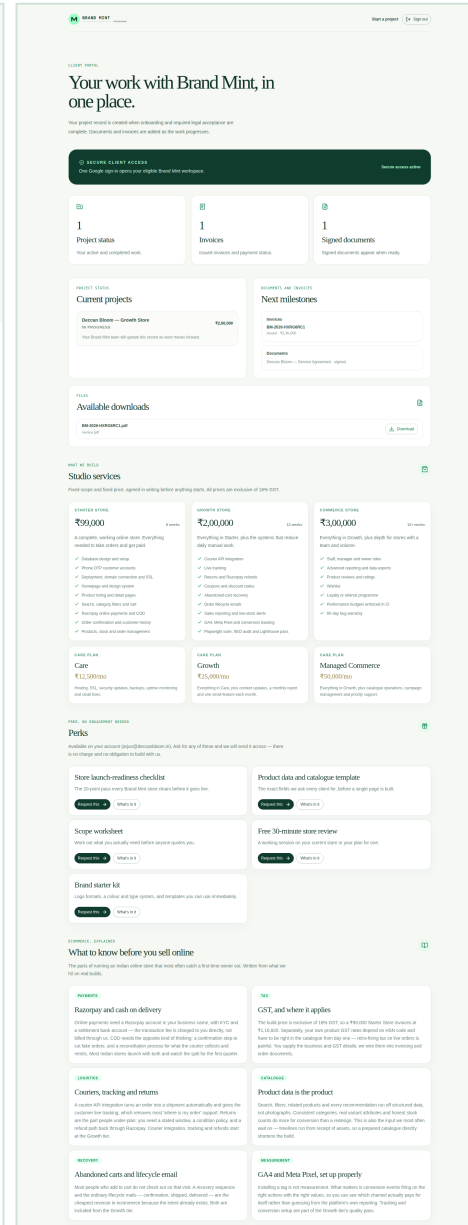

YOU — Agency OS

Rs.2,00,000 plus 18% GST = Rs.2,36,000, with a numbered invoice and a PDF generated and stored.

THEM — Client portal

The invoice appears with its number and total, and the PDF is available to download.

17. Payment is recorded

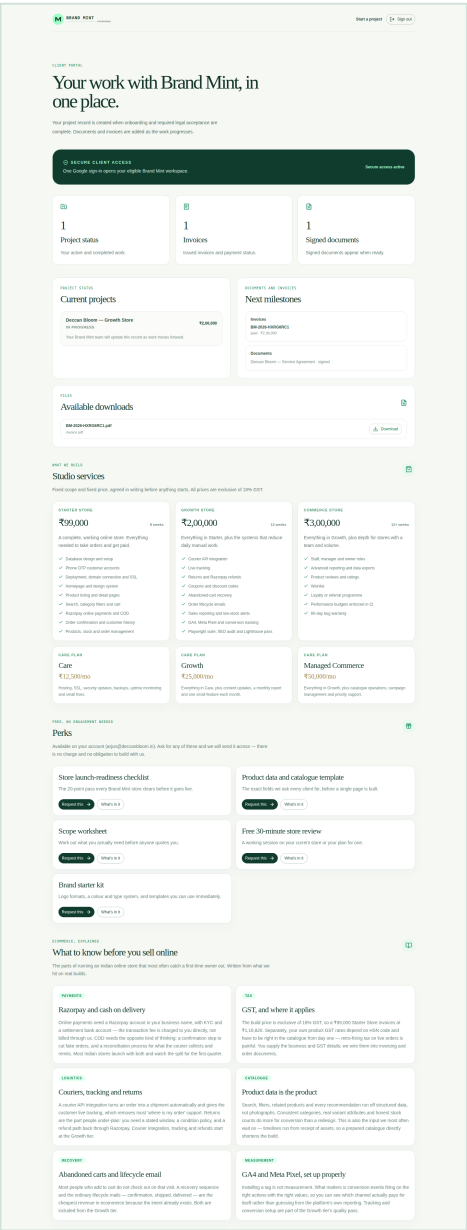

YOU — Agency OS

Marked paid. This is also what promotes the client from lead to active and moves the revenue figure.

THEM — Client portal

The invoice reads as paid.

18. The work is completed

YOU — Agency OS

Client review and then Complete, each gated on its required steps. Anything outstanding was overridden deliberately, and that override is recorded as a notification.

THEM — Client portal

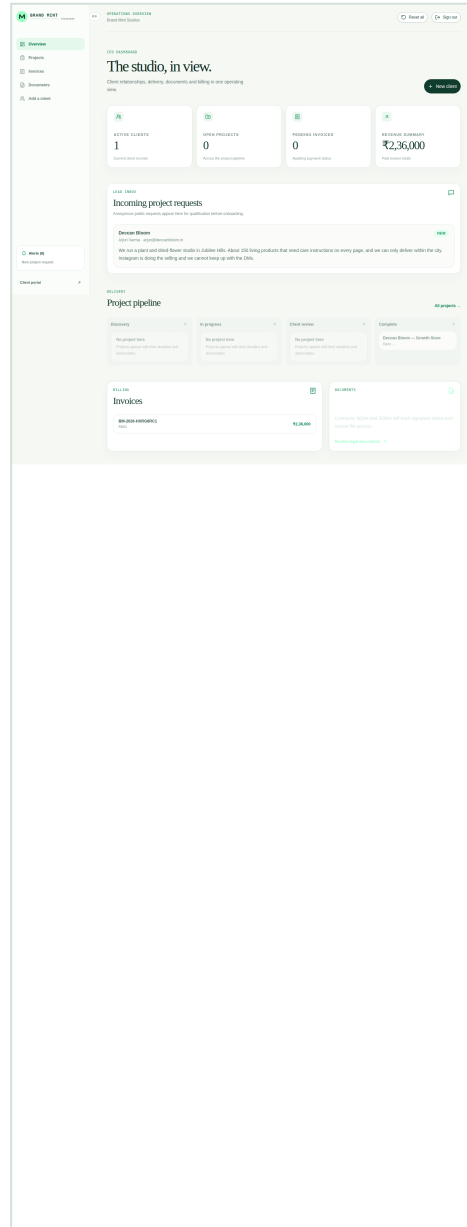

The project shows as complete.

[illegible]

19. Where it ends

YOU — Agency OS

One active client, no open projects, the revenue recorded. The whole cycle, from a stranger's message to a paid and finished job.

THEM — Client portal

Their finished project and their paid invoice.
