20-POINT PASS

Launch-readiness *checklist*

Every Brand Mint store clears these twenty checks before it goes live. Run them against a store you already have. Anything unticked is losing you orders or trust, usually both.

01 Speed and mobile

- [ ] **Lighthouse 90+ on mobile, all four axes**
  Performance, Accessibility, Best Practices, SEO. Test the home page, a product page and the cart. Chrome → DevTools → Lighthouse, mobile preset.
- [ ] **Largest Contentful Paint under 2.5 seconds on 4G**
  Usually the hero image. Serve WebP or AVIF, sized to the slot, and preload it.
- [ ] **Images lazy-loaded below the fold**
  Every product image outside the first screen carries loading="lazy".
- [ ] **Tested on a real Android and a real iPhone**
  Not the emulator. Tap targets, sticky bars, keyboard on the checkout form, the back button.
- [ ] **No horizontal scroll at 320px wide**
  Shrink the browser to a small phone. Nothing should push the page sideways.

02 Commerce, end to end

- [ ] **A real Razorpay order, start to finish**
  Place a ₹1 order with a live card or UPI. Confirm the order appears in admin, stock decrements, and the confirmation arrives.
- [ ] **A real cash-on-delivery order**
  Same path, COD. Confirm the order flags as unpaid and the confirmation step works.
- [ ] **A refund, back by the original method**
  Refund the ₹1 order from admin. Watch it land in Razorpay and in the customer's email.
- [ ] **Order emails and the GST invoice arrive**
  Confirmation, shipped and delivered mails; invoice PDF with GSTIN, HSN and the right rate. Check the spam folder too.
- [ ] **A coupon applies and expires correctly**
  Create a test code, use it, confirm it stops working after its end date or usage cap.

03 Trust and legal

- [ ] **Terms, Privacy, Shipping, Returns and Cancellation pages exist**
  Linked from the footer and from checkout. Razorpay checks for these before enabling settlements.

- [ ] **Legal name, address, contact and grievance officer visible**
  Consumer Protection (E-Commerce) Rules 2020. A name, an email and a response time.
- [ ] **MRP, net quantity, manufacturer and country of origin on packaged goods**
  Legal Metrology rules apply to the listing, not just the pack.
- [ ] **Privacy policy matches what the store actually does**
  Analytics, pixels, WhatsApp, email tools: if it runs, it's named. Marketing opt-in is separate from purchase.

04 Technical

- [ ] **Domain, SSL and redirects**
  http → https, www ↔ bare domain, one canonical version. Certificate auto-renews.
- [ ] **Custom 404 page and a working search**
  A dead link should lead somewhere useful, with a search box and the top categories.
- [ ] **Backups and uptime monitoring switched on**
  Daily database backup you have restored at least once. An uptime monitor that messages you.

05 Marketing plumbing

- [ ] **Link previews render on WhatsApp and Instagram**
  Open Graph title, description and a 1200×630 image on every product and the home page.
- [ ] **GA4 and Meta Pixel fire the right events with values**
  view_item, add_to_cart, begin_checkout, purchase with amount and currency. Verify in DebugView and the Pixel helper.
- [ ] **Sitemap submitted, robots.txt correct, Search Console verified**
  Products and categories in the sitemap; admin and cart paths disallowed.

> Want us to run this against your store and send back the list? It's free. message us on WhatsApp (the green button on brandmintstudios.in) with "store audit", or sign in at brandmintstudios.in and ask from your portal.

Free to use and share. Not legal or tax advice.
